

# WAR ON CORONA

## CORONA'S WEAPONS

Corona is like a very sticky, small oil drop

Corona can enter through mouth, nose, eyes and ears

Corona is a virus

Corona is fat

Corona loves cold things, can live in fridge for upto 28 days

Corona loves hard, smooth surfaces like metal, glass and plastic and can live on them for many days

Corona hides well, an infected person may not show any symptoms

Corona can infect anyone - old, young or child

Corona is everywhere, all over the world

## OUR WEAPONS

Oil cannot be washed by water alone, washing thoroughly for 20 secs with Soap or Alcohol based solution can wash it away from our hands

It cannot enter through rest of the skin, cover the face with a face shield/mask when in public places to prevent its entry

It cannot walk like an insect from our hands to our face unless we touch our face, practice not touching the face often

It does not stay afloat in the air, reusable Cloth Mask is a good protection

Don't eat cold/uncooked things from outside; eat hot, cooked food

Surfaces like door handles, public taps etc. are easy to clean with soap solution, so clean them often. For items that cannot be washed, store them for a week untouched before using them

Maintain Social Distancing (3 ft or more) in all public places irrespective of whether people around are showing any symptoms or not. You could also be a spreader without knowing so don't spit and always cover your face with your elbow when sneezing or coughing

A healthy person with good eating habits, exercising regularly can fight it easily without requiring any hospitalisation

We can fight it only when we come together as a community; practice social distancing; inform authorities about any symptoms and isolate ourselves with strict discipline
